User Import/Export

The User Import/Export AMB CMS module will you to import an existing database of users, creating user accounts and generating a welcome email. The module currently supports the import of two file formats: csv and xlsx. This module will also allow you to export your application's users.

Features

User Import of csv and xlsx file formats
Welcome email generation for csv files
Dynamic mail-merge on Welcome Email
User Export in csv file format

Coming next

Welcome email generation for xlsx files
Export of Loyalty Card points

App manager front-end interface

IMPORT EXPORT APP USER

Using this functionality you'll be able to import an external database of existing users. Upon importing of the file, a welcome email will be sent to the users with the new App account details.

The user database needs to be submitted in csv format. Please download a sample file here: example.csv

file to import :
Choose file   No file chosen

☑ Is password send to users by email?

Please type below the welcome email to be sent to the users upon account creation or when the users DB is imported. You can use the tag [firstname],[last-name],[email], [password] and [app-name] to personalize the email body and subject.
